

# Iranian Network of Urban Morphology

## Starting a new to study the rooted

During ISUF 2019 in Nicosia, the idea of an Iranian network of urban morphology was conceived in conversations with Vítor Oliveira. With his encouragement, it was decided to do a project on reviewing the studies of urban form in Iran to clarify the leading scholars of urban morphology in this country. The project ended with an article published in the Journal of Urban morphology in April 2022 (Abaee, 2022). Part of the contributors who addressed the Iranian urban form with a transparent disciplinary approach recognised for the establishment of the Iranian network. However, it must be said that the study of urban form in Iran suffers from linguistic, terminological and disciplinary biases. For me, it was a great honour to present the process of establishing the Iranian network to the ISUF council in the Lodz and Cracow conference this year. During recent months, the Iranian network of urban morphology has benefited from the generous supports of Giuseppe Strappa and Vítor Oliveira. Now, the initial steps of the establishment are proceeding. I am proud to announce the collaboration of the following colleagues to establish the Iranian network (the order is alphabetic): Mazyar Abaee (Research and training director, Urban planning and Architecture Research Centre of Iran,) Zahra Ahari (Professor, Shahid Beheshti University, Tehran,) Pantea Alipour (Instructor, University of Art, Tehran,) Eisa Esfanjari (Assistant Professor, Art University of Isfahan, Isfahan,) Toofan Haghani (Assistant Professor, Islamic Azad University, Central Tehran Branch, Tehran,) Nasim Iranmanesh (Instructor, Islamic Azad University, West Tehran Branch, Tehran,) Mahta Mirmoghtadaee (Planning and Urban Design Department Director; Road, Housing, and Urban Development Research Centre,) Azadeh Mohajer Milani (University Of Tehran, Tehran,) Maryam Mohammadi (Associate Professor, Islamic Azad University, West Tehran Branch, Tehran,) Mohammadreza Noghsanmohammadi (Associate Professor, Yazd University, Yazd,) and Homeira Shayesteh (Senior Lecturer, Middlesex University, London.) The Iranian network regrets not benefiting from the collaboration of an essential international scholar of the field, Kayvan Karimi (Senior Lecturer, The Bartlett School of Architecture, UCL, London and Space Syntax Ltd. Director), in the initial steps. Yet we are proud of receiving his compassionate companionship. The Iranian network of urban morphology is a newcomer and is making its initial steps. In contrast, the Iranian urban form is a senior with ancient roots, historical growth, contemporary innovations and current complexities. We are starting “the newcomer” with the aim and hope to investigate, study, understand, analyse, evaluate and finally, practically encounter “the senior”.

(Mazyar Abaee)

“the newcomer” with the aim and hope to investigate, study, understand, analyse, evaluate and finally, practically encounter “the senior.”
